#### LABEL SPECIFICATIONS & SIZING

- 1. Labels must be die-cut with gap for label sensor. Labeling automation systems cannot run/index butt-cut labels.
- 2. Label liner without perforations are preferred, as perforations are typically not compatible with labeling automation systems.
- 3. Eye-mark required for clear labels, where applicable.
- 4. For printing, labels must be Thermal Transfer or Direct Thermal compatible.
- 5. Label samples must be provided to Panther Industries no less than 10 business days prior to requested ship date.
- 6. All Panther Industries systems will operate with labels wound in or out. We recommend labels wound out, as shown here.

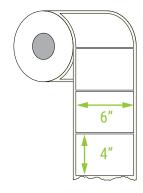

### LABEL SPECIFICATIONS

### HOW TO DETERMINE YOUR LABEL SIZE

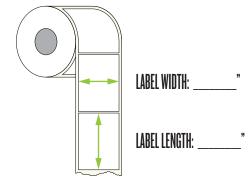

# 4x6 LABEL SIZE EXAMPLE Print Width x Print/Feed Length The label width is 4", the label length is 6".

**6x4 LABEL SIZE EXAMPLE**Print Width x Print/Feed Length
The label width is 6", the label length is 4".

# WHAT IS YOUR LABEL SIZE?

PI-WORKSHEET-012521

<sup>\*</sup> Label width may dictate size of print engine required for your system

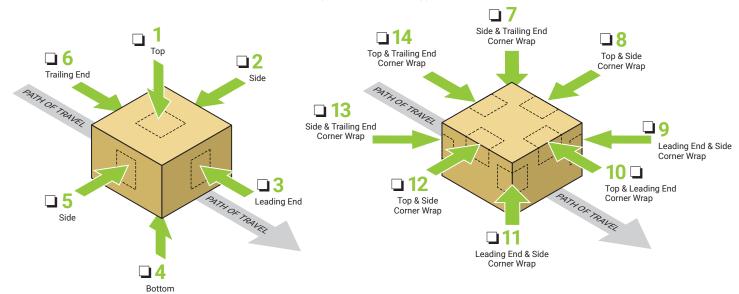

# PRINT AND APPLY OR PREPRINTED LABEL STOCK

Is your label stock blank with Blank, then Printed w/ Pr	content printed from a print en int Engine	_	ady preprinted? Applicable
PRINT ENGINE PREFERENCE For printed content, please in No Preference	· · · · · · · · · · · · · · · · · · ·	ırer preference for your labelinç eywell/Datamax	g automation system (check one):
PREPRINTED LABEL STOCK			
If your label stock is preprint	<b>ed,</b> what is the orientation of th	ne content on the label roll (che	eck one)?
Leading edge of label is bottom of imprint	Leading edge of label is top of imprint	Leading edge of label is left side of imprint	Leading edge of label is right side of imprint
1 <b>V V</b>	2 A A	3 A A	4

# LABEL LOCATION

Please indicate where the label will be applied to the item (check all that apply):

### LABEL APPLICATION ORIENTATION

Please indicate the orientation of the label imprint after the label is applied to the item (check all applicable options).

#### SIDE/FRONT APPLICATION How is the label oriented on the side/front? Landscape Portrait Square 3 Landscape Portrait Square Select label imprint orientation: ■ Top of imprint at top of item Top of Item A Trailing End Leading End Bottom of Item Top of imprint at bottom of item Top of Item Trailing End Leading End A Bottom of Item Top of imprint at trailing end of item Top of Item Trailing End 4 Leading End

Leading End

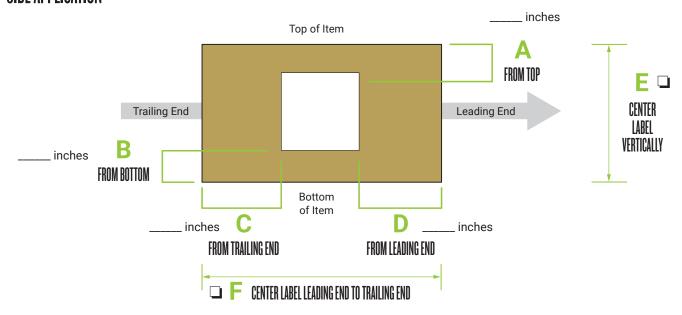

# LABEL APPLICATION ACCURACY

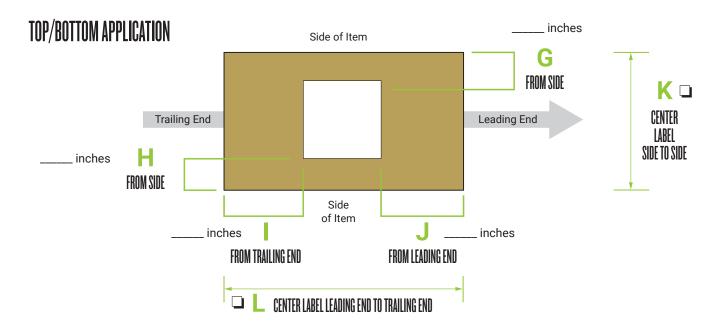

What is the desired label placement accuracy (minimum tolerance is 1/8" / 0.125") \_\_\_\_\_\_ inches

#### LABEL APPLICATION POSITION

What is the specific location of the label on the item?

# SIDE APPLICATION

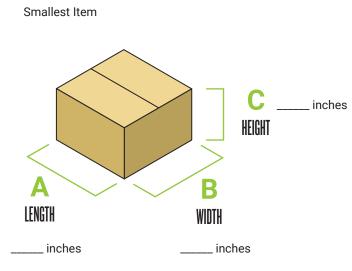

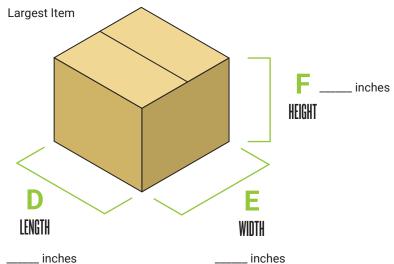

# SIZE AND WEIGHT OF ITEMS

Please indicate the dimensions of your smallest and largest items (indicate dimensions in inches):

# SIDE APPLICATION

Additional item sizes to be aware of:

Length	Width	Height
	<i>,</i>	
"	<i>n</i>	n
,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,	,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,,	""

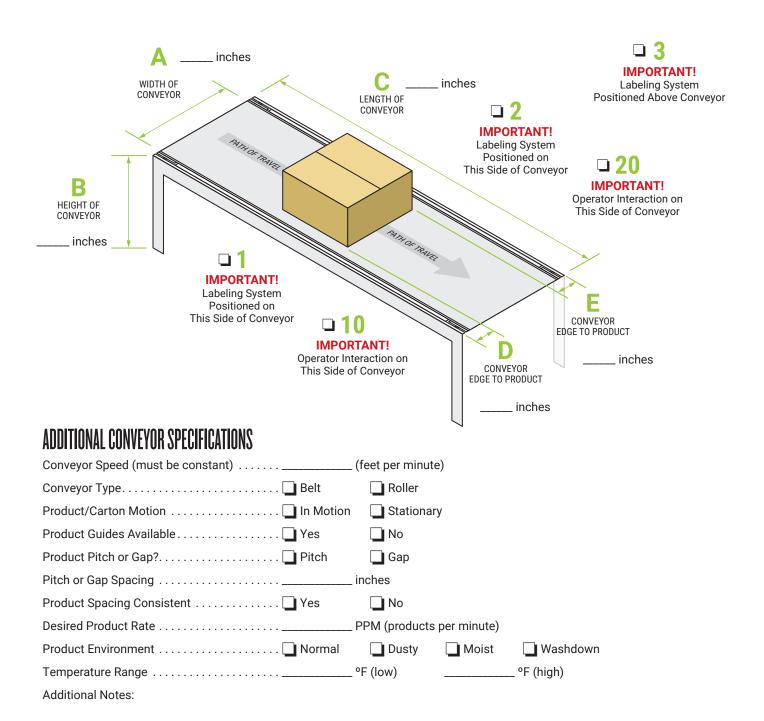

# PRODUCT WEIGHT(S)

Minimum Weight	Maximum Weight
lbs.	lbs.

#### SYSTEM LOCATION AND CONVEYOR SPECIFICATIONS

Please indicate the specific dimensions of your conveyor system and placement of labeling system (all dimensions in inches):

Important – It is highly recommended the labeling conveyor stops only when an E-STOP is activated or the conveyor is clear of all product. Starting and stopping the labeling conveyor during labeling operations can adversely affect label placement.

OII	nг	'n	nΤ	ווח	ΛTI	ın	r
М	۲ŀ	K.	N١	RII	Ш	IIK	ŀ

If you answered "Yes" to the above, please collect the additional information on this and the next page.

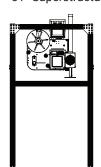

2 Systems

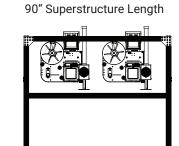

If "No", you may complete the online project survey with the information you have compiled up to this point.

# SYSTEMS PER SUPERSTRUCTURE

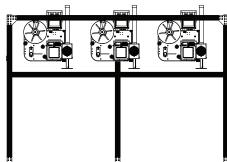

Please indicate the number of labeling systems required per superstructure:

1 System 51" Superstructure Length

3 Systems
131" Superstructure Length

# SUPERSTRUCTURE SLIDE

Will your superstructure require a slide for the labeling system, providing an operator with better ergonomic access and safer maintenance/service interaction?

Yes

☐ No

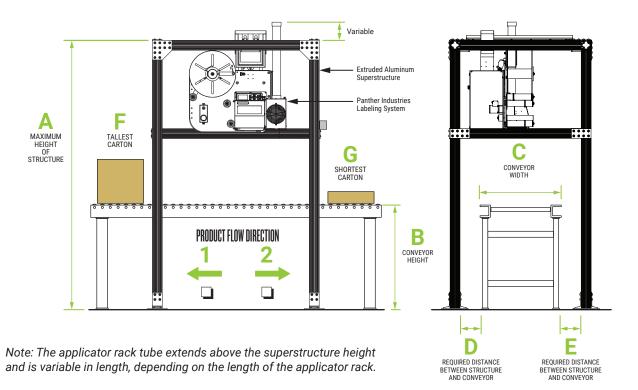

# **SUPERSTRUCTURE**

Please indicate the following related to a superstructure that may accompany the conveyor and labeling system (all dimensions in inches).

Standard superstructure widths are 40", 50", and 59". Depending on the width of your conveyor, combined with the distance required between it and the structure, a custom superstructure width may be necessary.

# ADDITIONAL CONVEYOR SPECIFICATIONS

A – Maximum height of superstructure	inches
B – Conveyor height	inches
C – Conveyor width	inches
D - Required distance between structure and conveyor	inches
E - Required distance between structure and conveyor	inches
F – Height of tallest carton	inches
G – Height of shortest carton	inches

Important – It is highly recommended the labeling conveyor stops only when an E-STOP is activated or the conveyor is clear of all product. Starting and stopping the labeling conveyor during labeling operations can adversely affect label placement.
